SUMMARY

Cybersecurity graduate with hands-on experience in incident response, digital forensics, and security operations. Experienced detecting, triaging, and investigating security events using SIEM and EDR, deploying and managing CrowdStrike Falcon EPP/EDR across enterprise environments, and responding to phishing and malware incidents. Published academic research on forensic artifact representation and antifoensics, with works accepted at peer-reviewed venues including Forensic Science International: Digital Investigation (Elsevier). Proficient in Python and skilled at building DFIR tooling and applying automation and AI to security workflows.

EDUCATION

Master's in Cyber Security (GPA: 3.98)

Aug 2024 – May 2026

University of New Haven, West Haven, CT

Bachelor's in Cyber Security, First Class Honors (GPA: 3.96)

May 2020 – Jun 2023

Coventry University, UK

SKILLS

Proficient with: CrowdStrike Falcon EDR (deployment, policy tuning, alert triage), SIEM (ELK, Splunk), threat detection & hunting (MITRE ATT&CK, STIX/TAXII, IOC analysis, Hayabusa), software deployment (PDQ Deploy, SCCM, Group Policy), network defense (Wireshark, tcpdump, Suricata, Snort), DFIR (Autopsy, EZ Tools, KAPE, Velociraptor, CASE/UCO), Python, Active Directory, MFA, host-based firewall, NIST CSF

Familiar with: PowerShell, Bash, Batch (AI-assisted for scripting and deployment tasks), Sentinel, ManageEngine, Azure (Entra ID, Defender), AWS (IAM, CloudTrail, S3), Kubernetes, Windows, Linux, Mac, penetration testing (Kali Linux, Metasploit, Burp Suite, Pacu, AzureHound), OSINT (Maltego, VirusTotal, OTX), CIS Benchmarks, AI/automation (Claude Code, Codex, LangChain), Docker, Ansible, Terraform

Certifications: (ISC)² CC • Cisco CCNA • Microsoft Azure Fundamentals (AZ-900) **CTF:** NCAE CyberGames (forensics, web exploitation, network analysis)

EXPERIENCE

Provost Research Assistant

Sep 2024 – May 2026

Tagliatela College of Engineering, University of New Haven, West Haven, CT

- Published first-author research at ICDF2C on applying LLMs to structured representation and analysis of forensic artifacts; built the Indicator of Inconsistency (IoI) SPARQL framework validated against 87M+ RDF triples across 5 antifoensic test scenarios, accepted at Forensic Science International: Digital Investigation (Elsevier).

Security Support Analyst

May 2023 – Mar 2024

Raechal Enterprise Pvt Ltd, Kathmandu, Nepal

- Deployed CrowdStrike Falcon EPP and EDR sensors across 9+ client environments totaling 1,000+ endpoints using PDQ Deploy and Group Policy; configured Host Groups, Prevention Policies (Detect-Only to Block), and sensor update rings; assisted with SIEM integration and on-site configuration support across client visits.
- Deployed ManageEngine MFA across client environments and assisted in standing up small-scale SIEM instances; coordinated configuration, integration with existing tools, and ongoing technical reviews with client IT teams.
- Delivered technical presentations on Falcon platform capabilities to prospective clients; collaborated with the sales team to support client acquisition and onboarding.
- Investigated phishing and ransomware precursor incidents using Falcon telemetry; correlated IOCs, escalated containment guidance, and delivered structured incident reports to technical and management stakeholders within SLA.

PROJECTS

Threat Detection & Purple-Team Lab

Self-Directed (2026)

Executed and detected 39 attack scenarios end to end in a self-built hybrid lab, validating the SIEM detection and telemetry for each technique across:

- Windows & Active Directory (13):** LSASS dumping, Kerberoasting, DCSync, Pass-the-Ticket, WMIExec/PSEXec lateral movement, ADCS abuse, LOLBAS/Rundll32 hunting, and Kerberos authentication anomaly detection.
- Cloud — Azure & AWS (12):** Entra ID password spray, MFA bypass, AzureHound mapping, app-registration abuse, cookie/HAR session hijacking; AWS IAM enumeration via CloudTrail, Pacu IAM brute force, and S3 exfiltration.
- Kubernetes & Linux (10):** K8s enumeration, exposed-service tunneling, container breakout (Poisoned Pod, Kubernetes Goat); Linux shadow-file exfiltration, web/interactive-shell detection, and C2 endpoint analysis.
- Purple team & automation (4):** purple-team detection workflows and automated endpoint-artifact triage with Hayabusa and LangChain.

Enterprise DFIR Case Investigation

Graduate Final Project | [Link](#)

Led end-to-end incident investigation for enterprise web-server compromise: correlated MFT/USN, EVTX, Volatility, and PCAP evidence to validate intrusion scope and exfiltration activity, then translated findings into remediation actions and security-posture recommendations.

Flamingo Neck Networks Internal Pentest

Course Lab | [Link](#)

Executed internal assessment (10.248.1.0/24) validating risk through chained attack paths; delivered 9 findings (2 Critical) with CVSS scoring, remediation priorities, and stakeholder-ready reporting.
